Alkali Neutralising Powder Shaker Bottles

PLPE302 2 - 500cc Shaker Bottles, Alkalis/Caustics, Powder

Designed for the containment and clean-up of alkali/caustic spills, this Alkali Neutralising Powder changes colour to indicate when the spillage is safe to remove.

- The Neutralising Powder will turn yellow when the alkali spillage is completely neutralised
- If possible, dilute caustic spillages with water before applying the Alkali Neutraliser Powder
- Packaged in a shaker bottle for easy application, simply apply powder to alkali spillages slowly from the outside to the centre
- Once neutralisation is complete, and if permitted, the mixture can be flushed away with water without damage to the environment
- Alternatively, collect granule/spill mixture and dispose according to your organisational policy
- Each 500cc shaker bottle will neutralise up to 500ml of 50% Sodium Hydroxide, up to 600ml of 45% Potassium Hydroxide, or up to 1L of 30% Ammonium Hydroxide

Colour	Light Yellow
Absorbency	Up to 2 L per box
Form	Powder
Neutralises	Alkalis/Caustics
Treats	Treats Up to 1L per Shaker
Sold as	2 per box
Weight	1.63 kg
Composition	Citric acid
Shelf Life	3 years
Volume	500cc Shaker Bottle

Technical Documents
